

CCSS INSTRUCTIONAL PRACTICE GUIDE

This guide provides concrete examples of what the Core Actions for implementing the Common Core State Standards (CCSS) for Mathematics in High School look like in daily planning and practice. It is designed as a developmental tool for teachers and those who support teachers and can be used to observe a lesson and provide feedback or to guide lesson planning and reflection. For all uses, refer to the CCSS for Mathematics (corestandards.org/math) and the widely applicable pre-requisites (achievethecore.org/prerequisites).

The Shifts required by the Common Core State Standards for Mathematics are¹:

1. Focus: Focus strongly where the Standards focus.
2. Coherence: Think across grades, and link to major topics within grades.
3. Rigor: In major topics pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

Date:

Class:

Teacher:

Unit or Lesson:

Standards Addressed:

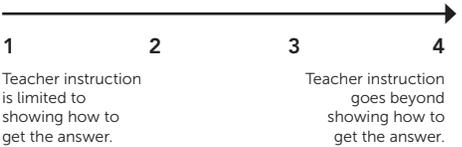

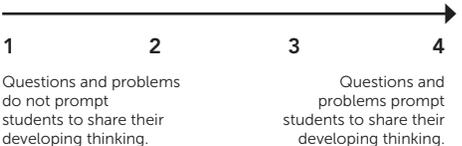

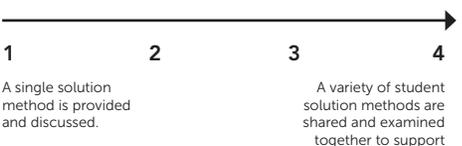

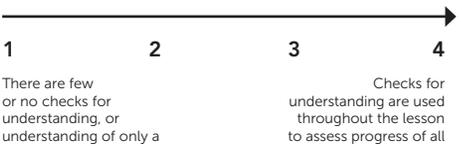

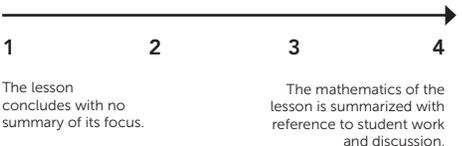

The Core Actions should be evident in planning and observable in instruction. For each lesson, artifacts or observables might include: lesson plan, problems and exercises, tasks and assessments, teacher instruction, student discussion and behavior, and student work. When observing a portion of a lesson, some indicators may be appropriately left blank.

CORE ACTION 1: Ensure the work of the lesson reflects the shifts required by the CCSS for Mathematics.

INDICATORS	EVIDENCE OBSERVED OR GATHERED							
<p>A. The lesson focuses on course-level cluster(s), course-level content standard(s) or part(s) thereof.</p>		<p>Notes:</p>						
<p>B. The lesson intentionally relates new concepts to students' prior skills and knowledge.</p>								
<p>C. The lesson intentionally targets the aspect(s) of rigor (conceptual understanding, procedural skill and fluency, application) called for by the standard(s) being addressed.</p>		<p>Note the aspect(s) of rigor targeted in the standard(s) addressed in this lesson:</p> <table border="0"> <tr> <td>Conceptual understanding</td> <td>Procedural skill and fluency</td> <td>Application</td> </tr> </table> <p>Note the aspect(s) of rigor targeted in this lesson:</p> <table border="0"> <tr> <td>Conceptual understanding</td> <td>Procedural skill and fluency</td> <td>Application</td> </tr> </table>	Conceptual understanding	Procedural skill and fluency	Application	Conceptual understanding	Procedural skill and fluency	Application
Conceptual understanding	Procedural skill and fluency	Application						
Conceptual understanding	Procedural skill and fluency	Application						
<p>D. The lesson reflects the full intent of the course-level cluster(s), course-level content standard(s) or part(s) thereof being addressed.</p>								

¹ Refer to Common Core Shifts at a Glance (achievethecore.org/mathshifts) and the High School Publishers' Criteria for the Common Core State Standards for Mathematics (achievethecore.org/publisherscriteria) for additional information about the Shifts required by the CCSS.

CORE ACTION 2: Employ instructional practices that allow all students to master the content of the lesson.

INDICATORS	EVIDENCE OBSERVED OR GATHERED ²	
A. The teacher uses explanations, representations, and/or examples to make the mathematics of the lesson explicit.		Notes:
B. The teacher poses high quality questions and problems that prompt students to share their developing thinking about the content of the lesson.		
C. The teacher provides time for students to work with and practice course-level problems and exercises.		
D. The teacher uses variation in students' solution methods to strengthen other students' understanding of the content.		
E. The teacher checks for understanding throughout the lesson, using informal, but deliberate methods (such as questioning or assigning short problems).		
F. The teacher guides student thinking toward the focus of the lesson and summarizes the mathematics with references to student work and discussion.		

² These actions may be viewed over the course of 2-3 class periods.

CORE ACTION 3: Provide all students with opportunities to exhibit mathematical practices in connection with the content of the lesson.³

INDICATORS	ILLUSTRATIVE STUDENT BEHAVIOR ⁴	EVIDENCE OBSERVED OR GATHERED ⁵	
A. The teacher uses strategies to keep all students persevering with challenging problems.	Even after reaching a point of frustration, students persist in efforts to solve challenging problems.	Scale: 1 = The teacher does not provide students opportunity and very few students demonstrate this behavior. 2 = The teacher provides students opportunity inconsistently and few students demonstrate this behavior. 3 = The teacher provides students opportunity consistently and some students demonstrate this behavior. 4 = The teacher provides students opportunity consistently and all students demonstrate this behavior.	Notes:
B. The teacher establishes a classroom culture in which students explain their thinking.	Students elaborate with a second sentence (spontaneously or prompted by the teacher or another student) to explain their thinking and connect it to their first sentence.	1 2 3 4	
C. The teacher orchestrates conversations in which students talk about each other's thinking.	Students talk about and ask questions about each other's thinking, in order to clarify or improve their own mathematical understanding.	1 2 3 4	
D. The teacher connects students' informal language to precise mathematical language appropriate to their course.	Students use precise mathematical language in their explanations and discussions.	1 2 3 4	
E. The teacher has established a classroom culture in which students choose and use appropriate tools when solving a problem.	Students use appropriate tools strategically when solving a problem.	1 2 3 4	
F. The teacher asks students to explain and justify work and provides feedback that helps students revise initial work.	Student work includes revisions, especially revised explanations and justifications.	1 2 3 4	

³ There is not a one-to-one correspondence between the indicators for this Core Action and the Standards for Mathematical Practice. These indicators and the associated illustrative student behavior collectively represent the Standards for Mathematical Practice that are most easily observable during instruction.

⁴ Some portions adapted from 'Looking for Standards in the Mathematics Classroom' 5x8 card published by the Strategic Education Research Partnership (math.serpmedia.org/tools_5x8.html)

⁵ Some or most of the indicators and student behaviors should be observable in every lesson, though not all will be evident in all lessons.
