

Smarter Balanced Assessment Item Illustrating 8.G.B.6

© ITEM RETRIEVED WITH PERMISSION FROM THE SMARTER BALANCED CLAIM 3 ITEM SPECIFICATIONS AVAILABLE FROM [HTTP://WWW.SMARTERBALANCED.ORG/ASSESSMENTS/DEVELOPMENT](http://www.smarterbalanced.org/assessments/development); ACCESSED NOVEMBER 2017. PLEASE CONTACT SMARTER BALANCED DIRECTLY FOR ADDITIONAL INFORMATION ON TERMS OF USE.

<p>The Pythagorean Theorem states that if a right triangle has legs of length a and b and hypotenuse of length c, then $a^2 + b^2 = c^2$.</p> <p>Figures 1 and 2 represent the key ideas in a proof of the Pythagorean Theorem.</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">  <p>Figure 1</p> </div> <div style="text-align: center;">  <p>Figure 2</p> </div> </div>	<p>A right triangle has legs of length a and b and hypotenuse of length c.</p> <ol style="list-style-type: none"> 1. 2. 3. 4. 5. 6. 7. <p>Thus, $a^2 + b^2 = c^2$</p> <p>Subdivide the large square in Figure 1 into a square with side-length a, a square with side-length b, and two rectangles with side-lengths a and b.</p> <p>Subdivide the large square in Figure 2 into four right triangles with legs a and b and a square with side-length c.</p> <p>The total area of the large square in Figure 1 is $a^2 + b^2 + ab + ab$.</p> <p>The total area of the large square in Figure 2 is $c^2 + 4(\frac{1}{2}ab)$.</p> <p>Start with two large squares with sides of length $a + b$.</p> <p>$a^2 + b^2 + ab + ab = c^2 + 4(\frac{1}{2}ab)$</p> <p>The two large squares have the same area because they are congruent.</p>
<p>Create an outline a proof for the Pythagorean Theorem based on Figures 1 and 2, by dragging the seven statements shown into a logical sequence.</p>	

Answer Key

The student drags the steps of the proof into a logical order. Note that 1 must be first and 7 must be last and 2 must precede 5 and 3 must precede 6, but any other permutations are allowed as long as they are consistent with these constraints).

Elaboration on Alignment

Standard 8.G.B.6 requires students to explain a proof of the Pythagorean Theorem. This item requires students to create a logical sequence in which to structure the statements based on given figures supporting a proof of the Pythagorean Theorem. Since assessments often have limited real estate dedicated to open-ended constructed response item types, developers must be thoughtful in creating items that still measure the demands of standards that ask students to “explain.”
